#### **RURAL PROPERTY CODING STANDARDS**

In rural or agricultural properties, a code will be used to indicate the presence of oil production in addition to the primary use of the property. This will be the third and fourth digits of the code used for that property. In all cases the numbers used will be "80".

Example:

4300 is irrigated land

4380 is irrigated land with oil production

This will be used when the owner of the real estate also owns the mineral rights and is producing the oil.

Parcels that involve separate ownership of real estate and mineral rights or where real estate and mineral rights are owned jointly but the mineral rights are leased will have a split parcel number for the mineral rights and will be coded with the appropriate number from the 8000 series.

In rural and agricultural properties, there are many instances where there are more than one use for a particular parcel. With the problem of having to determine all of the combinations we might encounter, a simpler way to code those properties would be to key on the major use that is involved. This could be done by using the third and fourth digits of the code. In this case, "90" would be used to indicate multiple use property.

Example:

4300 - irrigated land

4390 - multiple use property with irrigated land being the major use

NOTE: This can be done for other types of property such as residential, multi-residential, commercial and industrial.
